SUMMARY

QA Analyst with nearly 3 years of QA experience across manual, regression, and UAT testing, grounded in a strong grasp of QA methodologies, the software development lifecycle, and Agile delivery. Skilled at turning requirements into clear test cases, finding issues early, and tracking defects through Jira and ServiceNow. Strongest in hands-on manual testing, UAT, and SAP S/4HANA validation, with Postman API testing and a growing, supporting-level command of SQL and automation (Selenium, Python). Known for attention to detail, clear communication, and a steady commitment to learning.

PROFESSIONAL EXPERIENCE

Scale AI / Outlier

Apr 2026 - Present

AI Evaluation Contractor · Freelance, Remote

- Reviews AI-generated outputs against detailed quality rubrics, flagging schema errors, instruction-following gaps, and inconsistencies across each task.
- Evaluates product requirements and workflow steps to confirm each output is accurate, complete, and follows the expected path.

HCLTech

Oct 2025 - Dec 2025

Analyst, Senior Analyst Program · Hybrid

- Took on escalated, high-priority issues that were blocking a live client, working them through to resolution so delivery could continue.
- Owned a specific test area end-to-end on a real client system, setting the testing approach, planning the coverage, and running the validation independently.
- Investigated complex workflow failures and data issues to pinpoint root causes and document clear resolutions, applying requirement review, risk-based test planning, and structured defect tracking.

Accenture

Mar 2024 - Oct 2025

Business Architect / Software Engineer · Hybrid · Function: SAP QA and IT Support

- Worked in a distributed Agile delivery team through the full lifecycle (plan, analyze, design, build, test, deploy), with daily scrums, sprints, and continuous delivery and feedback cycles.
- Validated SAP S/4HANA business processes (SAP SD and HANA, accessed through Citrix) across regression, smoke, UI, and UAT testing, covering multiple modules and release cycles.
- Ran API tests in Postman with JavaScript checks, wrote basic SQL queries to confirm data accuracy, and used supporting-level Selenium and Python scripts during regression.
- Investigated workflow failures, data mismatches, and system defects using SAP tools, SQL, and ServiceNow, tracing each to its root cause and seeing it through to resolution.
- Processed around 10 tickets a day in ServiceNow, maintaining clear validation notes, escalation records, and a close-out report on every case.
- Partnered with QA and support teams across Agile sprints to retest fixes and keep systems stable, keeping testing reports and release records current.

Self-Employed

Oct 2023 - Present

Freelance QA Tester · Remote · Concurrent with other roles

- Takes on freelance manual testing engagements alongside primary roles, delivering functional and regression testing for clients on short-term contracts across web applications and software workflows.
- Selects the right tool for each engagement: Selenium for UI checks, Postman for APIs, SQL for data validation, and Jira for defect tracking.

iQor

Jan 2024 - Mar 2024

Account Manager Expert · Onsite, Sta. Rosa

- Managed customer accounts in a fast-paced telco support role, verifying accounts, resolving service issues, and handling escalations while meeting strict compliance standards.
- Logged, tracked, and documented every case in Hercules and Jira, keeping a clear record from first report through to resolution.

TCL Online Services

Feb 2023 - Oct 2023

QA Trainee / Technical Support Representative · Onsite

- Carried out QA internship work, including process research, workflow mapping, and documentation, while resolving around 30 hardware and software issues a day.

- Validated issues, ran follow-up checks and basic functional tests, escalated complex cases, and kept clear records in the ticketing system.

EDUCATION

Systems Technology Institute - San Pablo

Jun 2019 - Sep 2023

Bachelor of Science in Information Technology

Relevant coursework: IT Service Management, Information Assurance & Security, Advanced Database Systems, Web Systems & Technologies, Mobile Systems & Technologies, Systems Integration & Architecture, and a 486-hour IT practicum.

PROJECTS

Warehouse Inventory Monitoring System

December 2022

BSIT Capstone Project · Delivered to a real client (Paring's Pharmacy)

- Built a desktop warehouse inventory system in a four-person team, with modules for product records, stock monitoring, and expiration tracking, plus barcode scanning and SMS alerts for low-stock and expiry.

QA Portfolio: Manual QA Case Studies

Self-made portfolio samples · jericsemeniegowork-boop.github.io/portfolio/

- Built three QA practice case studies (a service filing workflow, a banking app, and a game patch), each with a full set of test plans, RTM, defect reports, and checklists.

CERTIFICATIONS & TRAINING

SAP & QA: SAP S/4HANA Associate-Level Training, SAP SD Functional Training, Agile Testing & Quality Engineering, Agile & Scrum Practices (Accenture)

Cloud, AI & Technical: AWS Cloud Practitioner (Accenture); Generative AI (Harvard Online); Computer Systems Servicing NC II (TESDA)

CORE SKILLS

QA & Testing: Manual, Functional, Regression, Smoke/Sanity, UAT, UI Testing, Defect Reporting, Test Case Validation, Release Validation, Bug Tracking

Automation & API: Postman API Checks (JavaScript), Basic SQL Validation, Basic Selenium / Python

Tools: ServiceNow, Jira, SAP S/4HANA (SD, HANA), Excel, Google Sheets, Microsoft Word, SharePoint, Browser DevTools, Git/GitHub, Azure DevOps, MySQL

Support & Ops: Ticket Handling, Incident Management, Escalation Coordination, Troubleshooting, Process Documentation, Workflow Validation
